Chinese Neuroscience Society (CNS) - Glial Branch
2025 Annual Academic Conference
& Frontier Symposium on "Glial Cells and Myelin Diseases"

Glial cells are the predominant cell type in the central nervous system and play a crucial role in brain function. In recent years, the physiological functions of oligodendrocytes and myelin, along with their significant roles in brain diseases, have become a major focus of extensive and in-depth research within the fields of neuroscience and neurology. To promote domestic and international collaboration and exchange in glial cell research and related fields, the Glia Branch of the Chinese Neuroscience Society will hold its 2025 Annual Academic Conference & Frontier Symposium on "Glial Cells and Myelin Diseases" in Chongqing from October 17th to 20th, 2025. Researchers and clinicians engaged in glial cell studies are cordially invited to participate. Together, we will explore the physiological and pathological functions of glial cells in myelin formation, discuss cutting-edge advancements, and examine the application of new technologies and methods in glial cell and myelin disease research. Thirty distinguished speakers from China and abroad will share the latest progress. The conference, organized by the CSN Glia Branch, will feature invited lectures and poster sessions, encouraging presenters to showcase their newest findings.
